

**Initial Meeting:**

## Critical Areas:

- Newsfeed
- Taking Pictures and posting
- Merging of articles sections so redundant information is not shown

## Task:

- User should be able to add to a newsfeed
- User should be able to choose articles from the news feed and merge them into one
- User should be able to pick topics to follow relating to their interest.

## Notes:

Joshua had a great Idea of merging articles to avoid reading the information you already know. We created the app page in figma and got started on the design concepts. We will meet tomorrow to go over figma prototype

**Prototyping:**

<https://www.figma.com/file/CoKRfb5dzlvFDtDXSi81HT5d/App?node-id=49%3A11>

We did not Sketch Ideas we just went straight into Figma and started designing from their.

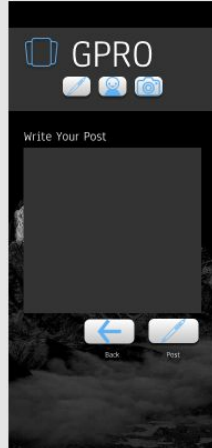

## Critical Areas/Example Task:

- User should be able to post photos
  - User should be able to customize multiple articles into one article without redundancy
  - User should be able to access a custom news feed and click on articles to view closer
  - User should be able to have a custom profile to access their own post
- We did a bit of testing and added extra pages to mimic functionality of an actual app
